EDUCATION

University of Waterloo

Bachelor of Computer Science Honours

Computer Science

April 2029

EXPERIENCE

SKILLS

PROJECTS

Job Aggregator, Tracker & Career Platform - JobScout

- Engineered a full-stack career platform that orchestrates cron-scheduled job board scrapers, LLM-driven scoring, and personalized cover-letter/CV generation via Celery and Redis pipelines, and incorporated extensive automated functional testing using Playwright to validate each end-to-end workflow, including email alert delivery and pre-interview preparation packet creation.
- Created a Chrome extension for form autofill and an LLM-enhanced auto-application bot, and built Playwright-based regression test suites to continuously verify UI interactions and data submission accuracy across browsers.

Tech Stack:

Agentic AI Coding Assistant - EnOSym

- Developed a locally-run agentic coding assistant featuring voice I/O via Whisper and Coqui TTS, and designed a Retrieval-Augmented Generation layer over SQLite-backed codebases using ChromaDB; incorporated systematic unit and integration tests for the LangChain orchestration loop to ensure reliable file retrieval, code generation, and execution.
- Constructed an isolated coding sandbox that supports iterative code generation and automated testing, integrating Playwright to execute browser-based validation scripts, and programmed a background agent that continuously scans repositories for improvement opportunities, with test harnesses verifying each suggested change.
